

# US 78 Landscape Improvements

Start Date: 2007 ■ On Going Project

The Landscape Master Plan was installed during the construction phase of US Highway 78 to remove the reversible lane system. At that time, a coordinated landscaping master plan was developed and installed along the 7 mile corridor. In 2011, 2012 & 2013, upgrades, additional plantings, and new mulch were also installed to add to the quality of landscape enhancements already in place. In 2014 the Georgia Department of Transportation selected Evermore to receive a GateWay Grant to improve the four quadrants areas along the fly-over at West Park Place Blvd. Additionally, street furniture, trash receptacles, and pedestrian islands were added to create a streetscape appearance.
